

Appl. No. 10/072,465
Amendment Dated October 5, 2005
Reply to Office Action of August 5, 2005

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Canceled).
2. (Canceled).
3. (Canceled).
4. (Canceled).
5. (Canceled).
6. (Canceled).
7. (Currently Amended) A method, comprising:

transmitting over a packet data network information pertaining to an incoming call to a receiving endpoint indicative of telephony monitoring and control functions from an application computer to a gatekeeper, the application computer being located separately from any of at least two nodes of the packet data network;

transmitting a notification request of telephony events occurring at the receiving endpoint from the application computer to the gatekeeper;

transmitting a notification that the incoming call is being received by the receiving endpoint from the gatekeeper to the application computer;

routing the incoming call through the gatekeeper to connect to a selected endpoint of the packet data network according to established rules;

Appl. No. 10/072,465
Amendment Dated October 5, 2005
Reply to Office Action of August 5, 2005

informing the application computer of an identity of an incoming caller;
providing to a user information relating to the incoming caller; and
causing a packetized telephone communications session between the at least two
nodes of the packet data network to occur.

8. (Previously Presented) The method of claim 7, further comprising:
determining a subject matter of the incoming call and obtaining information
relating to that subject matter; and
displaying information relating to the caller and to the subject matter.
9. (Original) The method of claim 8, further comprising enabling a user to access
additional information relating to the caller and/or the subject matter.
10. (Original) The method of claim 7, further comprising utilizing indicia from the
incoming call to identify the caller.
11. (Original) The method of claim 10, utilizing the caller's telephone number to
identify the caller.
12. (Previously Presented) The method of claim 7, displaying information on a
monitor that is accessible to a user.
13. (Original) The method of claim 7, further comprising obtaining information from

Appl. No. 10/072,465
Amendment Dated October 5, 2005
Reply to Office Action of August 5, 2005

the incoming caller and providing the obtained information to a user.

14. (Original) The method of claim 13, further comprising:
assigning an identifier for the incoming call; and
caching the incoming call in combination with the obtained information and the
call identifier for later retrieval.
15. (Original) The method of claim 14, further comprising:
retrieving and forwarding the incoming call and the obtained information to a
user.
16. (Canceled).
17. (Canceled).
18. (Canceled).
19. (Canceled).
20. (Canceled).
21. (Canceled).
22. (Canceled).
23. (Canceled).
24. (Currently Amended) An article comprising a computer readable medium having
instructions stored thereon which when executed causes:
transmitting over a packet data network information pertaining to an incoming
call to a receiving endpoint indicative of telephony monitoring and control functions from

Appl. No. 10/072,465
Amendment Dated October 5, 2005
Reply to Office Action of August 5, 2005

an application computer to a gatekeeper, the application computer being located separately from any of at least two nodes of the packet data network;

transmitting a notification request of telephony events occurring at the receiving endpoint from the application computer to the gatekeeper;

transmitting a notification that the incoming call is being received by the receiving endpoint from the gatekeeper to the application computer;

routing an incoming call through the gatekeeper to connect to a selected endpoint of the packet data network according to established rules;

informing the application computer of an identity of an incoming caller;

providing to a user information relating to the incoming caller; and

causing a packetized telephone communications session between the at least two nodes of the packet data network to occur.

25. (Previously Presented) The article of claim 24 wherein the instructions also cause information regarding subject matter of the incoming call to be obtained and displayed.

26. (Currently Amended) Apparatus comprising:

an applications computer to provide a user information relating to the incoming caller of telephone calls transmitted over a packet-switched data network under its control; and

a gatekeeper to establish telephone calls over the packet-switched data network, and to receive instructions from, and send messages to, the applications computer, said

Appl. No. 10/072,465
Amendment Dated October 5, 2005
Reply to Office Action of August 5, 2005

messages indicating at least the identity of an incoming caller;

wherein the application computer is to transmit a notification request of telephony events occurring at the receiving endpoint to the gatekeeper; and

wherein the gatekeeper is to transmit a notification that the incoming call is being received by the receiving endpoint to the application computer.

27. (Original) The apparatus of claim 26 wherein plural applications computers are configured to issue instructions to a single gatekeeper.
28. (Original) The apparatus of claim 27, wherein the gatekeeper establishes the telephone calls between at least two endpoints in the data network.
29. (Original) The apparatus of claim 28, wherein the applications computer is arranged to extract additional information from the caller, and to present this information to a user.
30. (Original) The apparatus of claim 29, where the information is presented to a user via a monitor or other display device.
31. (Original) The apparatus of claim 30, wherein the applications computer is further arranged to communicate with the caller and the user via voice recognition and voice synthesis techniques.

Appl. No. 10/072,465
Amendment Dated October 5, 2005
Reply to Office Action of August 5, 2005

32. (Original) The apparatus of claim 31, wherein the user is a called party.
33. (Original) The apparatus of claim 32, wherein said applications computer is configured to instruct a gatekeeper to initiate a call, and to await a message from said gatekeeper to complete the call.
34. (Previously Presented) The apparatus of claim 33, wherein the gatekeeper is programmed to inform the applications computer when information regarding the identity of the caller is acquired.
